"You will love this book. It's completely accessible and captures the thrill, potential, and heartbreak of an edgy mathematical problem in terms that nonmathematicians will appreciate. After reading The Golden Ticket, I sort of hope P isn't NP after all."--Vint Cerf, Google Vice President and Chief Internet Evangelist and one of the "Fathers of the Internet" "The P-NP problem is fundamental to computer science, and indeed all of mathematics. This book presents an engaging exposition of the problem, its history, and importance. In the process, it touches on major topics appearing in university computer science courses, all presented in an amusing style requiring no background in mathematics beyond the ability to solve Sudoku puzzles. I highly recommend it."--Stephen Cook, formulator of the P-NP problem "This book, written by a world-class master of the field, is a grand tour of the most celebrated and profound unsolved problem in computer science. Fortnow's many ingenious explanations make the mysteries of computational complexity accessible to anyone interested in the fundamental questions: what can be computed and how fast can we compute it?"--John MacCormick, author of "Nine Algorithms That Changed the Future" "This book is meticulous. Fortnow has really tracked down the history and background of this important and timely subject. Even complexity theorists will benefit from his fine scholarship. The Golden Ticket is the first of its kind--a book for general readers about complexity theory."--William Gasarch, University of Maryland "Nobody explains the importance of the P-NP problem better than Fortnow."--William J. Cook, author of "In Pursuit of the Traveling Salesman: Mathematics at the Limits of Computation"
In Search of the Multiverse, John Gribbin, Aug 27, 2009, Science, 240 pages. We once had to abandon the idea of earth being at the centre of the universe. Now, we need to confront an even more profound possibility: the universe itself might just be one.

Out of Their Minds The Lives and Discoveries of 15 Great Computer Scientists, Dennis Shasha, Cathy Lazere, Jul 1, 1998, Biography & Autobiography, 291 pages. "Out of Their Minds" profiles 15 of the planet's foremost computer scientists, including eight winners of the Turing Award, computing's Nobel Prize. Based on recent interviews.

Quantum Consciousness The Road to Reality, Shantilal G. Goradia, Apr 28, 2011, Body, Mind & Spirit. The fine structure constant, and the strong coupling constant are two main physical constants that define our understanding of the world. We do not know their origin. Here.

Dictionary of Mathematical Games, Puzzles, and Amusements, Harry Edwin Eiss, 1988, Mathematics, 278 pages. Identifies and provides the rules for games involving manipulation, topology, paradoxes, numerology, number patterns, mirrors, magic squares, logic, and geometry.

Graphs, Networks and Algorithms, Dieter Jungnickel, Mar 10, 2006, Mathematics, 628 pages. This text is aimed at anyone who has to teach combinatorial optimisation. It is very helpful for students, teachers, and researchers in this area. The author finds a synthesis.

Investigations into scintillating fiber calorimetry and a measurement of the two-photon production of charged meson pairs, D. Acosta, 1993, 430 pages.
